3.	Persons responsible for procedure	2

1. Purpose of Procedure

The portfolio managers (**Partners**) appointed as corporate authorised representatives Copia Investment Partners Limited (**CIPL**) must not:

- 1) place CIPL's interests or their own interests over those of clients, and
- 2) prefer the interests of any client over another client.

This duty may be tested when securities trades are allocated by Partners across portfolios, mandates or clients (**Funds**).

A Partner must not preferentially allocate traded securities across portfolios with the purposes of enhancing the performance of any particular Fund.

This procedure sets out the operational requirements for ensuring trade allocations are made in compliance with our duties under its Australian Financials Services Licence.

All trade allocations must be made on an equal and fair basis. If it is not possible to achieve this, then the exception must be documented and reported when the trade bookings are made.

2. Procedure

The following procedures will be followed for all trade allocations.

2.1 Target weightings

All actual and proposed securities holdings will be recorded in the portfolio register maintained for the each fund and investment mandate.

Funds and client mandates with the same investment strategies will be mirrored in the portfolio register.

The relevant portfolio manager will document **Target Weightings** for securities in each portfolio. A Target Weighting is the market price of the security divided over the total market value of the portfolio (calculated at the time the Target Weighting is set) expressed as a percentage.

The portfolio register will calculate on a live basis the numbers of securities to be bought or sold to bring each Fund and client mandate into balance with the Target Weightings (**Securities Adjustments**).

2.2 Trade bookings

All securities trades will be recorded in IRESS IOS. This system will record the placing broker, security and trade price.

At the end of each day, all confirmed securities trades will be booked to the Funds and client mandate portfolios.

Bookings will mirror, as closely as possible, the Securities Adjustments reported in the portfolio register after closure of the ASX. These Bookings will be advised to the brokers and custodian through the IRESS IOS (Bookings Screen).

All trades will be allocated across the portfolios at the average transaction price realised for that security on the trade day.

In situations where it is necessary to sell a position in one portfolio and to buy the same position in another portfolio for both to reach their Target Weightings, it is permissible to trade the security between the two portfolios as a special crossing. The security price that will be used for any special crossing will be the volume-weighted average price (**VWAP**) for the security on the trade date.

2.3 Exceptions

On occasion it may not be possible to allocate trades across portfolios based on a close matching of the Securities Adjustments.

If so, the individual responsible for booking the trades must complete an exceptions report at the time of the bookings. This exception report must be provided at the time of the bookings to the:

- a) the Head of Investments of the relevant Partner
- b) Chief Operating Officer, and
- c) Risk & Compliance Manager

The exception must be approved by the relevant Head of Investments.

If the disparity has caused a Conflict of Interest, then procedures set out in the Conflicts Management Policy will be followed.

2.4 Post Trade compliance

Trade allocations will be reviewed per the post trade compliance procedures.

At the end of each trading day, a system report will be generated which will show:

- i) Securities Adjustments for all CIPL and client mandate portfolios covering all securities traded on the day
- ii) Trade records including allocations actually made to CIPL and client mandate portfolios
- iii) A variation report showing as a percentage, all variations between Securities Adjustments and actual trade allocations

This report will be provided to both the Chief Operating Officer and the Risk & Compliance Manager.

3. Persons responsible for procedure

The Heads of Investment of each Partners are responsible for implementing this policy. These are:

Investment Team	Officer responsible for implementation
OC Funds	Robert Frost

Investment Team	Officer responsible for implementation
<i>Chester Asset Management</i>	<i>Rob Tucker</i>
<i>Vertium Asset Management</i>	<i>Jason Teh</i>
